

Sliding Gate Valve 8020

GS 1 series - DN 15 up to DN 150

Pneumatic sliding gate valve for controlling and shutting off liquid and gaseous media for industrial applications

- Space saving wafer type construction
- Lowest possible weight
- Quiet operation
- Fast response time
- Control of high differential pressures with small actuators
- Greatly reduced energy consumption rates due to short strokes and low actuating forces on the throttle element
- High Kvs-values
- Meets the requirements of TA-Luft 2021

Technical Information

 Standard

The quoted pilot pressure must be available as a minimum value for use without a positioner. If a positioner is applied the pilot pressure is determined by the adjustment of the positioner. The standard adjustment value is 4 bar gauge. The spring configuration D enables the use of the control valve without positioner in line with a restricted control capacity. In this case the valve can be driven by a controller with a standard signal of 0.2 to 1.0 bar.
